

At **Bristol-Myers Squibb Canada**, treating today's medical problems with the best-possible medications is a big part of the puzzle. Developing new, innovative medicines takes years of intensive research and development. Recognized as one of the best in the industry, our pharmaceutical pipeline is how we define hope. And how we create it.

Our goal is in finding effective solutions to address unmet medical needs, not only for today but, for years to come. Working towards the future, we are focused in the areas of: affective (psychiatric) disorders, Alzheimer disease, atherosclerosis/ thrombosis, cancer, diabetes, hepatitis, HIV/AIDS, obesity, rheumatoid arthritis and related diseases and solid organ transplant rejection. Collectively, our employees represent many cultures and backgrounds, but are bound together by the desire to extend and enhance human life.
